REDUCING GREENHOUSE GAS EMISSIONS

At DON GREGORY BY DUNAS, we conduct an analysis of greenhouse gas emissions per guest, calculated based on electricity, water, diesel, gas, chemical products, and high-emission food menu choices.

Metric	2024	2025	DIF
Greenhouse gas emissions per guest/day	3,97	3,28	-0,69

As shown in the summary table, this year we DECREASED emissions by 0.69 points compared to the previous year, which makes us very proud. Nevertheless, we recognize that we must make a significant effort to fulfill all commitments outlined in our sustainability management system.

PROTECTING AND SUPPORTING BIODIVERSITY

At DON GREGORY BY DUNAS, we are conscious of the importance of conserving our environment and protecting biodiversity, as we are located in a privileged natural setting that requires care.

A key focus for us is helping to preserve and restore local endangered species. To support this, we provide guests with information on local species and guidance on how to avoid harming flora and fauna during their sightseeing visits.
